

## **Bookwin5 Prices**

**1st March 2001**

### **The Membership Database**

This module comprises a database of members in Microsoft Access format and may be used as a 'stand-alone' product or linked to other modules below.

Price for the Membership Database **£450-00**

### **The Sports Booking System**

This module enables both short-term and long-term bookings in conjunction with the membership database. The price below includes all items as described in the literature.

Price for the Sports Booking System **£1200-00**

### **Product Sales**

This module comprises a database of products sold and POS software as described in our manual to run on a conventional PC with the option of a touch screen, cash drawer and printers.

Product Sales and POS software **£600-00**

### **Financial Analysis**

This module collects all financial data relating to bookings and product sales and creates a variety of reports mainly presented as figures rather than graphically (there are many inexpensive software products which will do this - eg Crystal Reports). Data is exported as Excel or Access files.

Price for Financial Analysis **£450-00**

The above prices exclude hardware costs, of course, but, apart from that, there are no hidden extras, no training courses, for example. We provide tech support free of charge but only ask that you appoint a person at the centre who would normally be responsible for contacting us.

### **Use on a Network**

The above prices are for use on a single PC. Price per additional PC **£200-00**

### **Hardware costs**

The above software is 'native' Windows 95 code. It runs happily over a Windows network so there are no special hardware requirements.

The prices above exclude VAT. One day of commissioning and training is included in the price (assuming the sale includes the Sports Booking System). Normally we would ship part of the product ahead of the commissioning in order that you can familiarise yourselves with it. Payment terms: negotiable but no payment required prior to delivery.
